

## B-460 Box Wrapping Machine

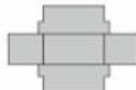

The machine is an ideal automation equipment for producing gift boxes and rigid boxes by manual locating the inner box and the facial paper on the assembly line, the fixed box is placed into the machine wood mold, then automatic running: Box gluing, folding, and forming are completed at one time.

### Machine features

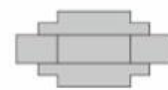

The machine is an ideal automation equipment for producing gift boxes and rigid boxes by manual locating the inner box and the facial paper on the assembly line, the fixed box is placed into the machine wood mold, then automatic running: Box gluing, folding, and forming are completed at one time. 15-25 pieces boxes can be produced per minute, which greatly improves the production efficiency of the rigid box and saves production costs, because each action is mechanically defensive standardizing the production of the product, greatly improving the quality of the product.

## The Machine Main Parameters

Model	B-460
Max Size of product	600*480*150mm
Min Size of product	80*60*10mm
Producing speed( Base on the height of box)	15-22pcs/min
Dimension of equipment (LxWxH)	1100×1300×2300mm
Packing size( LxWxH)	1400×1500×2400mm
Packaging weight	850KG
Requirement for power supply	220V
Air supply demand	≥0.6KG

## Machine Performance

- The machine is completed by servo motor and pneumatic, PLC programming control.
- The machine debugging is completed by the man-machine interface selection, which is easy to adjust.
- All control parts of this machine adopt international high-end brand, with low failure and high precision.
- This machine has a touchable emergency stop switch, which.
